

# Izzy's story (told by her mum)

## Rehab works!

My daughter suffered neurological damage out of the blue aged 6, when an unknown virus caused inflammation in her cerebellum.

She was discharged from hospital in a weak and wobbly state suffering severe ataxia and was offered no physio support from the NHS. Fortunately I found Hobbs Neurological Rehabilitation through a friend.

My daughter was seen by Debbie Jay at Hobbs on a regular basis for many months. The **support and encouragement** Debbie gave in each session was extremely valuable and we always left with exercises to practice and a sense of progression.

Debbie was reassuring, calm and patient and full of useful suggestions and information; her understanding of what was happening neurologically was really reassuring for me.

I cannot recommend Hobbs highly enough. Here is Izzy (in the blue) with her sister Emily enjoying taking a cheeky little Alpaca for a walk, a fun way to celebrate such wonderful progress; rehab works!
