

Paul's success using the **Mollii Suit**

Several months ago I sought assistance from Hobbs in connection with my limited mobility. This was a combination of an episode of transverse myelitis (MS) and a 17 level spinal fusion (accelerated spinal degeneration).

I am pleased to inform you all that after a trial period with the Mollii Suit, I was so impressed with the results that I have now purchased one. The spastic tone in my lower limbs and the spinal pain are much improved for up to 48-hrs after wearing the suit. Although the outlay was not insignificant, the improvement in my quality of movement, function, and back-pain has made it worthwhile for me.

It may be worthwhile pointing out to any other potential customers that the initial 1-hr assessment was free and provides the patient with a very clear indication as to whether the Mollii suit will be beneficial. In my case after the successful initial assessment, I hired the suit for a month prior to making the decision to buy outright.

Obviously I am very happy to share my experiences with all relevant therapists and their patients.

Thanks to all of you for your help.
