

Hobbs Rehabilitation Rehabilitation Medicine Consultant

Rehabilitation Medicine (RM) Consultants work with other medical specialists and healthcare professionals to provide care and interventions for people with complex disabling conditions. The aim of the input is to improve quality of life through management of function and the promotion of long-term social participation.

What can RM help with

- Traumatic Brain Injury
- Stroke
- Progressive Neurological Conditions
e.g. Multiple Sclerosis, Motor Neurone Disease,
Parkinson's Disease, Guillain-Barré
- Spinal Cord Injury
- Vascular Disease
- Cerebral Palsy

RM Consultants have the advantage of being able to develop a long-term plan of care for patients over months or even years from soon after an acute event, through to discharge and ongoing rehabilitation in the community. This gives the opportunity to get to know the individual on a holistic basis.

If you contact Hobbs Rehabilitation to find out about the Rehabilitation Medicine Consultant service, you will be contacted to discuss your needs and the medical requirements you have. If you wish to proceed, you will then be given an appointment to start the initial assessment.

Sialorrhoea (Saliva) Assessment and Treatment

The clinician will assess and treat any severe drooling so we can reduce the impact that it has on your quality of life.

The various techniques on offer are:

- Review of oral and topical medication options
- Potential Botulinum Toxin Injections to the salivary glands

Outpatient Complex Neuro-Disability Service

The aim of our complex neuro-disability service is to assess the needs of individual clients and improve both their function and improve their quality of life. We support a wide range of complex cases from physical and cognitive disability to challenging behaviours and prolonged disorder of consciousness.

Complex Spasticity Service

Specialising in treatments of focal, regional and generalised spasticity, the clinician will assess and treat spasticity so we can reduce the impact that spasticity has on your quality of life.

The various techniques on offer are:

- Review of anti-spasticity medications
- Botulinum Toxin Injections
- Discussion around surgical options
- Collaborative working with therapists to provide splinting and follow-up therapy as appropriate
